LUCY 5 AI Voice Clone

BRAiNDECK

Braindeck

We are a DNA-embedded content company that develops A.I voice clone.

We are focusing on developing a voice cloning model that provides the best performance by precisely analyzing and designing human voice feature and its function.

We consider issues related to human survival and evolution and pursue a better future for people.

Lucy5, AI Voice clone

Lucy5 is a high-quality generative model based on a multi-layered process. With just 3 minutes of voice data input, anyone can sing the song they want in the voice they want without language barriers.

Sound quality: 16bit, 44.1kHz (CD quality)

High-quality voice clone with excellent synchronization

Multi-layered AI voice cloning technology quickly and accurately analyzes the personalized voice DNA, creating natural, high-quality vocals for any genre of song.

Quickly generated with only a small amount of voice data

Through the Speech To Singing process, you can create a song in any language with just 3 minutes of voice input. By creating demo content, you can efficiently improve the completeness of the content.

Applicable to various content businesses

You can create new business value in various fields such as A&R, entertainment business, and short content markets such as YouTube and TikTok.

Thorough protection of personalized voice IP

To protect the personalized voice IP, all collected data is automatically deleted after the clone is generated. We send your personal clone data so that only you can own it, and it is the only original IP, so please keep it well.

How to use LUCY5

Supporting revenue generation for YouTubers and TikTokers through easy access to high-end voice content production

Music releases using a clone IP with my voice DNA

Preview of large-scale musical and animation casting styles

Providing customized solutions for the A&R business, including audition programs

Providing customized solutions for the A&R business, including audition programs
